

Easy Lift Lid and Safety Grate

Improve the health and safety of your employees.

'us' – Utility Services is improving work safe practices by installing Easy Lift Lids and Safety Grates on water and sewer valve pits across South East Water's operating network.

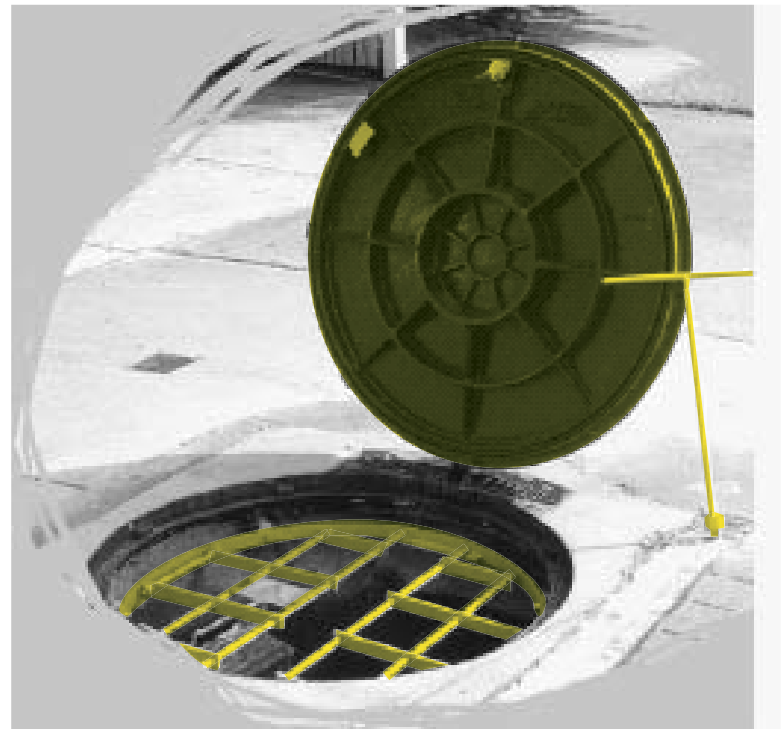

Existing concrete lids can place enormous strain on the body and expose employees to potential back injuries. Once the lid is removed from the pit, it can also become a serious tripping hazard.

The new generation manhole lid is designed to be lightweight, ensuring minimal stress is placed on the body, especially the back. The lid is spring-loaded, allowing the handler to open it with ease.

To prevent falls into sewer/water pits and to comply with new legislative requirements (relating to falls from heights), 'us' – Utility Services has also installed stainless steel safety grates designed to sit beneath the lid. This gives additional safety for both our employees and other services who require access.

The grates are designed to allow pumps and other items to be raised or lowered into the manhole while they are safely in place. Alternatively, the grates open upward for wider access.

The Easy Lift Lid and Safety Grate has a wide application and should be of interest to councils, industrial customers, metropolitan and regional water businesses alike.

Features

The Easy Lift Lids and Safety Grates are available in three sizes to accommodate a wide range of activities:

- 600mm round
- 950mm round
- 750mm square

Other features include:

- Lids can easily be installed at new sites
- Locking mechanism to prevent unauthorized entry
- Low maintenance needs
- An O-ring seal which eliminates noise and odours
- Stainless steel spring mechanism

The Easy Lift Lid and Safety Grate can be purchased together or separately, however, optimum safety is achieved with the installation of both in parallel.
