

ENVIRONMENTAL POLICY

We are committed to behave in an environmentally responsible manner through actively responding to the expectations of our communities; meeting all environmental licence, contract and regulatory requirements; seeking to continually improve environmental performance.

To achieve this objective, we will:

- Maintain environmental management as a high priority by publication and reinforcement of this policy.
- Maintain an Environmental Management System (EMS), aligned to the International Standard ISO 14001, as an integrated part of 'us' - Utility Services' business.
- Maintain a process of continual quality improvement for environmental management issues through the EMS.
- Annually review of our Environment Improvement Plan to ensure environmental aspects are identified and addressed by the company, and performance targets are continually stretched.
- Maintain strategic environmental planning by ensuring environmental impact assessment of projects and strategies remains a requirement of the EMS.
- Continuing a disciplined management process for achieving targeted environmental performance levels by routinely monitoring and reporting on significant environmental aspects.
- Maintaining effective communication with external environmental stakeholders by regularly liaising with the Customer Advisory Committee, regulators, and customers and also through community education.
